SUMMARY

As a 4th year Information Technology student, I am looking for an internship opportunity at a company to continue developing my programming and technology skills, and contribute to the company's real projects. I hope to be able to apply the knowledge from personal projects to a professional working environment.

Education

University of Economics and Technology - Information Technology

- Grade Point Average (GPA): 3.48

Work experience

Project: Research on vulnerability classification using Dropout technique using deep learning approach

1/2025 - 4/2025

- **Technology used** Python, GCN, CNN, SAGEConv, RF, MLP models
- **Description:** Use Dropout technique to balance data then feed into RF or MLP for classification . □
- **Result:** Create models to classify source code with high accuracy .

Project: Designing API for social network using Springboot and FastAPI 12/2024

- 1/2025

- **Technology used** Java, Spring Boot, Python, FastAPI □
- **Description:** Build social network APIs .
- **Result:** The APIs run smoothly as required .
- **Git link:** <https://github.com/phuongok2112003/Mangxahoi.git> , <https://github.com/phuongok2112003/fastapi.git>

Project: RESTful API for Web Magazine

7/2024 - 8/2024

- **Technology used:** Java, Spring Boot
- **Description:** Develop an API system to manage magazine content, including posting, editing, user management , authentication and authorization functions .
- **Result:** Completed on time with full functionality, stable API system.
- **Git link:** https://github.com/phuongok2112003/tckhcn_uneti.git

Project: RESTful API for Online Test Web

10/2023 - 6/2024

- **Technology using** Java, Spring Boot
- **Description:** Build an online test platform that supports multiple question types and test management features.
- **Result:** Successfully deployed system with the ability to serve hundreds of concurrent users.
- **Git link:** <https://gitlab.com/nvc.nvcuong/online-exam.git>

Project: Face Recognition using CNN

1/2023

- **Technology used:** Python, Keras, sklearn
- **Description:** Building a CNN model to recognize faces from images
- **Results:** High accuracy in face recognition was achieved on the test dataset.
- **Git link:** https://github.com/phuongok2112003/nhan_dien_mat.git

Extracurricular activities

Scientific Research Group (NCKH) – Topic: Using Deep Learning to Distinguish Security Vulnerabilities

2/2023

- Join the research team on applying deep learning in detecting and classifying security vulnerabilities.
- Develop and test deep learning models to improve accuracy in vulnerability identification.

Skill

- **Programming skills:** Java, C#, Python, C++ , SQL, MYSQL, Mongodb
- **Web development skills:** RESTful API, Spring Boot, Django, FastAPI
- **Machine Learning/Deep Learning skills:** Keras, TensorFlow
- **Soft skills:** Teamwork, Time management, Problem solving , git flow , docker skills
